- Total Population (15-44 years) by Age Group
- NH Black Teens (15-19 years)
California Gonorrhea Rates by Selected Characteristics, 2010
Methods Notes

Birth Rates
California birth numbers are from the California Department of Public Health (CDPH). California birth rates are based on birth numbers from CDPH and updated, Census-2010-based population estimates and projections from the California Department of Finance (DOF).

United States and Texas birth numbers and rates are from the National Center for Health Statistics’ (NCHS) National Vital Statistics Reports. Texas birth rates for some years were calculated using birth numbers and bridged-race population estimates from the NCHS. As state teen birth rates for 2011 are not yet available from NCHS, we estimated the Texas 2011 teen birth rate by applying the 2009–2010 Texas rate change to the estimated change between 2010 and 2011.

Teen birth rates for other Western nations are from the United Nation’s 2011 Demographic Yearbook.

Chlamydia and Gonorrhea Rates
California chlamydia and gonorrhea rates were calculated using case numbers from the CDPH Sexually Transmitted Diseases Control Branch’s report, Sexually Transmitted Diseases in California 2010, and updated, Census-2010-based population estimates and projections from DOF.

United States and Texas chlamydia and gonorrhea rates were calculated using case numbers from the Centers for Disease Control and Prevention’s National Center for HIV/AIDS, Viral Hepatitis, STD, and TB Prevention and bridged-race population estimates from the NCHS.

More details on sources of data and methods used are available here: http://teenbirths.phi.org/May2013Methods.pdf.
